

Equivalent Fractions Mission

Warm-up and worked example

Name: _____

Date: _____

PAGE 1 | WEEK 6, DAY 3

YOUR MISSION Generate and recognize equivalent fractions using models and number lines.

SMART MOVE Keep the whole the same and ask how large one part is.

Math Talk

How can two fractions with different numbers name the same amount?

My idea:

New Words

fraction	numerator	denominator
My meaning or picture:	My meaning or picture:	My meaning or picture:

Worked Example

Do this example with your teacher. Say what changes and what stays the same.

- 1. Overlay $\frac{1}{2}$ and $\frac{2}{4}$ strips.
- 2. Mark both on a number line.

What the example shows: _____

Equivalent Fractions Mission

Learn it and show your thinking

Name: _____

Date: _____

PAGE 2 | WEEK 6, DAY 3

YOUR MISSION Follow the learning path, then explain the big idea.

SMART MOVE Draw before asking for a rule.

[] **Step 1:** Overlay $\frac{1}{2}$ and $\frac{2}{4}$ strips.

[] **Step 2:** Mark both on a number line.

[] **Step 3:** Show $\frac{2}{3} = \frac{4}{6}$ with equal-sized wholes.

[] **Step 4:** State that equivalent fractions occupy the same point.

[] **Step 5:** Avoid teaching cross-multiplication.

My model, drawing, or organized work:

The big idea in my own words:

Equivalent Fractions Mission

Practice lab

Name: _____

Date: _____

PAGE 3 | WEEK 6, DAY 3

YOUR MISSION Use a model, equation, or explanation for every task.

SMART MOVE Check whether your answer is reasonable.

1. Find equivalents for $\frac{1}{2}$, $\frac{1}{3}$, $\frac{2}{3}$, and $\frac{3}{4}$.

2. Complete missing numerators or denominators using models.

3. Sort equivalent and non-equivalent pairs.

Choose one answer and prove it another way:

Equivalent Fractions Mission

Challenge and final check

Name: _____

Date: _____

PAGE 4 | WEEK 6, DAY 3

YOUR MISSION Try an unfamiliar problem and defend your reasoning.

SMART MOVE A wrong first idea can still lead to a strong solution.

Challenge Mission

Find as many fractions equivalent to $\frac{1}{2}$ as possible with denominators no greater than 20. Describe the pattern.

My plan:

My solution and proof:

Final Check

Prove $\frac{3}{6} = \frac{1}{2}$ in two ways.

☐ I can teach it

☐ I need practice

☐ I need help

Equivalent Fractions Mission

Reusable math tool
