

Final Assessment Administration Guide

Independent assessment | 60-75 minutes

PURPOSE AND VALIDITY

Goal: obtain an accurate picture of independent Grade 3 mastery, strategy use, and reasoning.

Assessment Theory

A useful assessment separates what the student can do independently from what the student can do with instruction. Standard directions, neutral responses, sufficient time, and written strategy observations make the results more trustworthy.

Core rule: Do not teach, hint, confirm answers, or name a method during the assessment. Record questions and misconceptions for the correction lesson.

What This Assessment Samples

- Place value, rounding, multi-digit addition, and subtraction.
- Multiplication and division through 12, properties, and unknowns.
- Fractions, elapsed time, measurement reasonableness, and data.
- Geometry, area, perimeter, and a non-routine system problem.
- Explanation, representation, checking, independence, and persistence.

Preparation and Exact Directions

BEFORE TESTING

- Print the five-page student assessment.
- Provide a pencil, eraser, ruler, and blank scratch paper.
- Remove visible lesson posters and answer aids.
- Plan one short movement or water break after Page 2.
- Keep an observation sheet; do not write on the student's assessment during testing.

Teacher says	"This assessment shows what you can do independently. Read each problem carefully and show your reasoning. You may use the scratch paper and ruler. If you are unsure, circle the item, make your best attempt, and continue."
Why	Establishes consistent conditions without increasing anxiety.
Listen for	Requests for clarification that concern directions rather than mathematical methods.
Then do	Repeat or paraphrase a direction neutrally. Say, 'Use your best mathematical judgment,' when the student asks for confirmation.

Teacher says	"You have plenty of time. After Page 2, we will take a short break. I cannot help with the mathematics today, but I will record anything we should revisit later."
Why	Protects independence while assuring the student that errors will become learning opportunities.

Permitted clarification: You may pronounce a word or explain a non-mathematical direction. Do not define vocabulary, suggest an operation, or point to a representation.

Answer Key: Items 1-10

SCORE ACCURACY AND EVIDENCE SEPARATELY

1. $8,000 + 300 + 5$; eight thousand three hundred five.
2. $7,049 < 7,094$; the hundreds match and 4 tens is less than 9 tens.
3. 6,750; 6,800.
4. Estimate about 4,700 or 4,800; exact sum 4,725.
5. 3,514; $3,514 + 3,486 = 7,000$.
6. 56; two valid strategies or representations are required.
7. 8; $8 \times 12 = 96$.
8. $n = 9$; n is the size of each group or the missing factor.
9. $7 \times 20 + 7 \times 3 = 140 + 21 = 161$.
10. 120 pencils.

Answer Key: Items 11-20

SCORE ACCURACY AND EVIDENCE SEPARATELY

- 11. $\frac{3}{4} > \frac{5}{8}$ because $\frac{3}{4} = \frac{6}{8}$.
- 12. 8.
- 13. $\frac{5}{4}$ is one fourth beyond 1.
- 14. 45 minutes.
- 15. 12 kilograms.
- 16. 4 occurs most often; four values are greater than 3.
- 17. Area 36 square units; perimeter 26 units.
- 18. Side length 8 units; area 64 square units.
- 19. Rectangle; all four sides equal would make it a square.
- 20. 6 chickens and 4 goats; $6 \times 2 + 4 \times 4 = 28$ legs.

Scoring, Diagnosis, and Follow-Up

USE RESULTS TO PLAN DAY 4

Suggested Scoring

- Items 1-19: 2 points each; 1 for a correct answer and 1 for required work, units, model, or explanation.
- Item 20: 4 points; 1 for each correct count, 1 for a valid representation, and 1 for proof.
- Total: 42 points. Report domain patterns in addition to the total score.

Error Codes

R - Reading: Misread a condition, symbol, unit, or question.
C - Concept: Used a model or relationship that does not match the mathematics.
P - Procedure: Understood the structure but made a computation or regrouping error.
E - Evidence: Answer may be correct, but required reasoning, labels, or units are missing.
K - Check: An unreasonable answer remained after an available check.

Post-Assessment Script

Teacher says	"You completed serious mathematical work today. We will not correct it now. Tell me which problem required the most thinking and where you checked your work."
Why	Ends with reflection while preserving the assessment for later analysis.
Then do	Name one observed habit such as persistence, organization, careful modeling, or checking.
